

# Get Up & Running

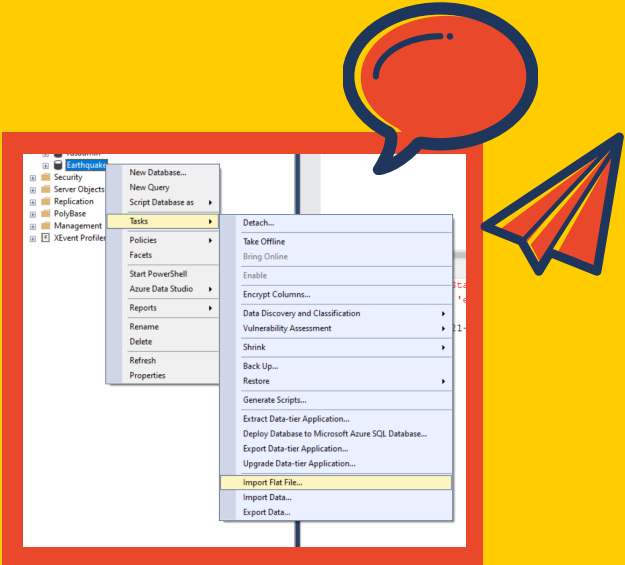

This document will help you take a flat text file and import it into an existing Database. The file format will be .CSV, also known as comma separated value.

## Get Started

After creating a New Database. Right-click on it and select:  
Tasks/Import Flat File.

### STEP 01

### STEP 02

Introduction  
Click 'Next'

## Specify Input File

Click 'Browse' to find the .csv file. Then select 'Open' change the table name if you'd like and click 'Next'.

### STEP 03

### STEP 04

## Preview the Data

Look over the data and click next. Then check the primary key box for earthquake\_id.

## The Delivery

Hit next. Then click Finish!  
Close the window...  
Your data is now ready.

### STEP 05
